

Topic for the lesson

Lesson No. 1

J. Doe

1 Idea

The idea of the summaries is to write up what was discussed in class, what you read, and other information from relevant sources. The summary must focus on relevant topics and discussions. You must avoid discussions on logistics and bureaucracy regarding the class. For example, discussing equations and ideas in detail is desired and encouraged; while discussing changes in dates for projects or changes in the evaluation that are not pertinent for the topics in class are frowned upon.

2 Section

You are free to organize the content as you like. You are highly encouraged in using sections and subsections.

2.1 What about references?

To use references you can use `bibtex` as defined above. Just place your `bibtex` entries within the `filecontents` environment and then use it to cite **Burt1983**.

3 Packages

Simply add the needed packages above the `document` environment, where it is marked with the comments. (You read the template, right?)

4 Figures and images

You can use images in your summary. Just create a folder called `images-x` within your working directory, where `x` is your assigned number. Note that you need to modify the `graphicspath` on the preamble of this file.

Prefer to use SVG files instead of raster images.
